

FLIPS

Forms & Label Intergrated Printing System

FLIPS - from DRS allows Optical Mark Reader (OMR) users to take control of the design and printing of scannable forms. Anyone familiar with word processing or desktop publishing will find it simple to develop professional looking forms in just a few hours.

FLIPS - is highly versatile, allowing users to design prototype forms – revisions and updates are easily created.

New to version 5 - Use FLIPS to create forms for image recognition options including constrained print fields, check boxes and more.

Design and print your own Optical Mark Reader (OMR) and image forms with FLIPS

The advantages of FLIPS:

- Save on forms design costs
- Reduce turnaround times for creating new OMR applications and modifying existing ones
- Quickly incorporate updates (logos, graphics, new questions, barcodes)
- Pilot new OMR applications before committing to large print runs
- Economically produce forms for low volume applications (typically print runs of less than 1,000)
- For large print runs, DRS' in-house printers will produce forms from your FLIPS designs
- Import text or graphics from any Windows application
- Easily merge fields (e.g. names and addresses) from a database
- Works with DRS SOSKit for OMR

FLIPS - includes the following:

- Works with Windows , NT, 2000 XP and Vista
- Full Windows interface:
 - open multiple forms
 - cut/paste within forms and across Windows applications
 - group/ungroup
 - send to front/back
 - zoom in/out
 - drawing tools including diagonals and round corners
 - use any Windows TrueType font
- Easily overprint to customise standard DRS stock forms
- Add OMR readable barcodes
- Advanced form design functions
 - alignment
 - set grid to match readhead spacing and clock track
 - nudge objects
 - create multiple layers of objects printing from CSV files
